Zamin district, Djizak

Abstract

Information technologies have affected every aspect of human activity and have a potential role to play in the field of education and training, specially, in distance education to transform it into an innovative form of experience. The need of new technologies in teaching learning process grows stronger and faster. The information age becomes an era of knowledge providing sound and unmatched feasibility for discovery, exchange of information, communication and exploration to strengthen the teaching learning process.

Key words: Information technology (IT), multimedia, aspects

Introduction

It is very difficult to imagine our lives today without technology. In particular, the telephone, computer and the internet are an integral part of human life turned around. That's why the 21st century is called the Age of Technology. Nowadays, technology is so advanced that every field, every science it serves as a foundation for development and prosperity. Education classes using modern technologies in the system independent search for knowledge by students; to analyze them, to evaluate their knowledge, to draw the right conclusions aimed at teaching.

IT in teaching

Computers, the Internet, and multimedia are also used in learning and teaching foreign languages and other technology exhibitions are important. New information technologies offer great opportunities in foreign language teaching, science plays an important role in improving the quality of education and the effectiveness of

education. As you know, there is no such thing as a modern course and the lesson should not take place without a teacher or student presentation. That's why half of all foreign language textbooks are multimedia, games and more consists of presentations and foreign language lessons without modern technology can't pass.

Decree of the President of the Republic of Uzbekistan dated December 10, 2012 "Foreign language on Measures to Further Improve the Education System "From modern pedagogical and information-communication technologies through the introduction of advanced teaching methods using teaching the next generation a foreign language that they can speak fluently radical improvement of the training system and its implementation based on their global development achievements as well as world information resources to benefit widely, to develop international cooperation and dialogue creating the conditions and opportunities for '' work and a number of things to do the need to perform important tasks. So from 2013 onwards Foreign languages have been taught since the 1st grade. The textbooks are also step-by-step is changing.

Foreign languages are taught in 4 aspects. They are: speaking, listening, writing and reading . I am going to tell you each of these aspects based on the experience with the role and importance of technology. It includes the followings:

The process of *listening* without the computer, player, CDs can't be done. Listening is the most important part of language teaching is one of the parts. In this case, the student simultaneously pronounces the pronunciation of the speaker, adherence to grammatical rules, attention to vocabulary and its meanings required to give. That's why it's important to listen and understand in every class textbook various cartoons, videos, multimedia and games are provided. From this in addition to those who want to learn independently, movies, songs and more they can easily learn a foreign language by watching and listening to videos. Students never want a real language environment if they want to learn a foreign language can't learn a foreign language without listening. It is important to learn a foreign language well the condition is to listen more and listen again.

IT can also be used in the process of *speaking*, and this ensures that the result is effective. He writes down what he says when he hears again, he realizes the mistakes in his pronunciation, and so on tries not to repeat the error. Some where you can learn a foreign language there are books and programs that act as live chatters with us. That is why we don't need anyone else. This is also modern technology is an achievement.

If we look at the *writing* process, how much is IT? We can see that For example, we are on a computer analyzes each word as you type, and the error is underlined draws a line. Also a story written by others over the internet, an essay and letters. Also across the country in our telegram group, which includes all foreign language teachers we analyze students 'writing and how to write to them we learn by discussing teaching.

Technology also has a special place in the *reading* process. Here are some suggestions on how to look or get an appointment for independent reading copy and distribute to students or display the text on a monitor, while one student is reading, the rest of the students can follow the text and will be able to analyze. This is also a foreign language of technology one of the advantages of teaching.

Conclusion

In the same way, teachers use the Internet to teach foreign languages and students will also have better opportunities in their work The introduction of ICT in the teaching process is also a topical issue. Modern educational programs for lesson effectiveness, searching for information on the Internet, results Growing interest in learning foreign languages as an international, intercultural understanding of communication, the ability to expand the scope of the learning environment is obtained on the basis of.
